

# Custom Folded Aluminium Leafguard

Our custom leafguard makes messy, time-consuming gutter maintenance ancient history. Made from perforated aluminium sheets it fits neatly into your gutters to reduce leaf entry.

The leafguard is manufactured using an aluminium sheet that is firstly perforated then custom folded to suit the spouting we are installing. The perforations allow water to pass through to gutters freely while leaves are removed naturally by the wind and rain making it the perfect choice on all homes and ideally suited for multi-level homes where access is an issue to clean out gutters.

Our leafguard is suited for most roof types including tiles, tin and slate. Other leafguard products will void your roof warranty as they require fixings through the roof and/or sealant to the roof which traps water. **NOT OURS!** – Our product sits between the fascia and the front of the spouting so no need to interfere with the roof.

Like all of our products and workmanship, our leafguard comes with a 10 year warranty. Due to the nature of our product it is best installed at the same time as your new spouting. This is a complete system and needs to be installed by one of our qualified team. Due to the design of this product it is only suitable for use with internal brackets. Below are some images from one of our completed installations....
