

Aluminium 80mm Seamed Downpipes

Roof Pitch	Maximum Roof Area served per downpipe (m ²)
0° – 25°	100
25° – 35°	80
35° – 45°	70
45° – 55°	60

Aluminium 80mm downpipes add the finishing touch to your installation. Aluminium downpipes are available in a limited range of colours – see the aluminium colour range in the included colour chart. Aluminium is a great option for coastal environments. The standard bends are 95 degrees and 30 degrees. Spreaders as per the photo below are also available in applications where higher level roofs need to discharge water onto lower level roofs. T Junctions are also available where 2 or more downpipes need to be linked together to discharge to a single drain. Bends, joiners and junctions all utilise cast aluminium fittings that are powdercoated to match the colour of the downpipe. Fixing is done with munzing rings which offer flexibility when varying offsets from the cladding are needed.

Downpipe T and L Spreader

Munzing Rings - Manufactured in aluminium then powdercoated to match the downpipe colour. Munzing rings are ideal for installations against weatherboards or with narrow soffits where a variable offset from the wall is required. The length of the threaded rod is cut to suit the offset of the pipe from the wall.
