

Coloursteel 150mm Downpipes

Roof Pitch	Maximum Roof Area served per downpipe (m ²)
0° – 25°	350
25° – 35°	290
35° – 45°	250
45° – 55°	200

Coloursteel 150mm downpipes add the finishing touch to your installation. Coloursteel downpipes are available in a wide range of colours and these are detailed in our colour chart. The standard bends are 95 degrees but custom angles can be done by hand mitring the pipes. L or T spreaders as per the photo below are also available in applications where higher level roofs need to discharge water onto lower level roofs. Bends utilise cast aluminium fittings that are powdercoated to match the colour of the downpipe. Fixing is done with munzing rings which offer flexibility when varying offsets from the cladding are needed. Please note this pipe is not locally manufactured. It is freighted from outside the region. Freight costs will be included in our quotes.

Downpipe T and L Spreader

Fixing

Munzing Rings - Manufactured in cast aluminium then powdercoated to match the downpipe colour. Munzing rings are ideal for installations against weatherboards or with narrow soffits where a variable offset from the wall is required. The length of the threaded rod is cut to suit the offset of the pipe from the wall.
