

Coloursteel 65mm Downpipes

Roof Pitch	Maximum Roof Area served per downpipe (m ²)
0° – 25°	60
25° – 35°	50
35° – 45°	40
45° – 55°	35

Coloursteel 65mm downpipes add the finishing touch to your installation. Coloursteel downpipes are available in a wide range of colours and these are detailed in our colour chart. The standard bends are 95 degrees but custom angles can be done by hand mitring the pipes. Bends are made using cast aluminium and powdercoated to match the colour of the downpipe. 30 degree bends, T Junctions and T Spreaders are not manufactured for 65mm downpipes. There are 2 fixing options available. Downpipe clips are suitable for most installations. Alternatively munzing rings offer greater flexibility when varying offsets from the cladding are needed or an alternative look is required. Both of these options are detailed below. Please note this pipe is not locally manufactured. It is freighted from outside the region. Freight costs will be included in our quotes.

Fixing Options

Downpipe Clip - This is the standard fixing system which is a cost effective method. Clips are manufactured in aluminium and powdercoated to match the downpipe colour.

Munzing Rings - Manufactured in cast aluminium then powdercoated to match the downpipe colour. Munzing rings are ideal for installations against weatherboards or with narrow soffits where a variable offset from the wall is required. The length of the threaded rod is cut to suit the offset of the pipe from the wall.
