Fits Leafguard	NO	

Marley Typhoon has a high front which helps hide untidy roof lines and provides a very neat end result. Marley Typhoon is available with internal brackets for a smooth clean finish. Select external brackets for a completely different look, the visible brackets become a design feature and make the inside of the spouting easier to clean. Marley Typhoon has a large capacity which combined with it's shape delivers a better rate of water flow. This enables the spouting to cope better with sudden downpours as well as decreasing the likelihood of leaf and sediment build-up (a bonus if you are collecting the rainwater for household use)

Unless otherwise stated pricing is for standard white. Coloured/metallic ranges priced on application.
